Automatic Telephone Exchange in San Sebastian. 72

Automatic Telephone Exchange in San Sebastian.

The City Council of San Sebastian passed a decision in the latter part of May to sign a contract with L. M. Ericsson for the delivery to the city of an automatic telephone exchange.

The plant is designed for a total capacity of 20,000 lines, the initial capacity being 5,000. A number of smaller rural exchanges, also automatic, will be connected to this exchange, forming so called satellite exchanges. Therefore, these exchanges will be equipped only with line finders, connectors and their associated devices, each call to and from such an exchange being

carried over the main exchange. As this plant is of exceptional interest from a technical point of view, it will be made the subject of a more exhaustive article in a subsequent issue of The L. M. E. R.

San Sebastian has a population of about 60,000, and is regarded by the Spaniards as the second capital of Spain, the Royal family as well as both the government departments and the foreign diplomatic corps making it their place of residence during the hot summer months.

The Madrid Exhibition of Telephone and Kindred Appliances

The Madrid Exhibition of Telephone and Kindred Appliances.

An exhibition of electric material and apparatus was held in Madrid during the month of December 1924, the exhibits consisting chiefly of telephone and radio material.

L. M. Ericsson's were represented by their general agent in Spain, Casa de R. Prado, as well as by their newly formed subsidiary company, Compañía Aspañola de Telefonos Ericsson S. A.

Telephone material, including instruments,

switchboards and a full automatic telephone exchange, as well as radio material — component parts, valve sets and crystal sets — were demonstrated at the Ericsson stand, a view of which is herewith reproduced. A complete time control plant was also exhibited.

The exhibition could boast a very large attendance and the automatic exchange, in particular — which was connected up and in full working order — attracted an unusual amount of interest.
